

Lecture notes

Regelungstechnik 1 (lineare Regelungen)

Linear control

Prof. Dr.-Ing. Steven Liu
Lehrstuhl für Regelungssysteme
Technische Universität Kaiserslautern

Chapter 0	Contents and references
Chapter 1	Principle, structure and application of feedback control
Chapter 2	Our first control design
Chapter 3	System models and characteristic properties of linear time-invariant systems in the time-domain
Chapter 4	Analysis of closed-loop SISO control systems
Chapter 5	System analysis based on frequency response
Chapter 6	Classical methods of controller synthesis
Chapter 7	Modeling of physical systems
Chapter 8	State-space analysis of linear time-invariant systems
Chapter 9	State-space control and observation
Chapter 10	Possibilities, constraints and limitations of control – An outlook
